International Journal of

CONTROL

Formerly "Journal of Electronics and Control"

Editor: J THOMSON

Editorial Board:

France - -	Professor P. AIGRAIN
Holland - -	Professor H. B. G. CASIMIR
U.K. - -	A. T. FULLER
Germany -	W. KLEIN
U.S.A. - -	J. C. LOZIER
U.K. - -	Professor J. C. WEST

Volume V. First Series

January 1967 to June 1967

CONTENTS OF VOL. V. (Nos. 1–6)

(FIRST SERIES)

NUMBER 1—JANUARY

Page

On the Reduction of Sensitivity in Multivariate Systems. By William A. Porter, The Systems Engineering Laboratory of the Department of Electrical Engineering, The University of Michigan 1

Is Orthogonal Expansion Desirable? By J. Hiller, School of Electrical Engineering, University of New South Wales, Sydney, Australia 11

A Novel System for Rapid Acquisition of the Sun in Solar Energy Conversion Systems. By Earl D. Eyman, Department of Electrical Engineering and Department of Mechanical Engineering, University of Iowa, U.S.A., and Robert H. Weakley, University of Colorado, U.S.A. 23

A Describing Function for Backlash. By U. S. Kuruppu, Department of Mechanical Engineering, University of Ceylon, Peradeniya, Ceylon 33

Output Signal-to-Noise Ratio of an Error Function Limiter. By S. Rauch, Canadian Marconi Co. Ltd., Montreal, Canada, and M. Fukada, Department of Electrical Engineering, McGill University, Montreal, Canada 47

A Model Reference Adaptive Control System using a Cost Function Criterion for Driers and other Dead-time Processes. By M. S. Beck and N. E. Gough, University of Bradford, School of Control Engineering 55

Frequency Domain Stability Criteria for Non-linear Multi-variable Systems. By A. G. Dewey, Centre for Computing and Automation, Imperial College, London 77

Derivation of the Moments of a Continuous Stochastic System. By I. G. Cumming, Centre for Computing and Automation, Imperial College London, S.W.7 85

Research Note:

Comment on "Simulation of Time Varying Differential Equations using the Analog Computer". By Y. V. Venkatesh, Department of Electrical Engineering, Indian Institute of Science, Bangalore 12, India 91

NUMBER 2—FEBRUARY

Page

The Inter-relation of Sampling and Transport Lag in Determining Control System Stability. By K. E. Tait, School of Electrical Engineering, University of New South Wales, Sydney, Australia, and R. B. Stanton, Teaching Fellow, School of Electrical Engineering, University of New South Wales, Sydney, Australia 97

The Identification of Parameters in Large Linear Dynamic Systems. By E. J. Davison, Department of Electrical Engineering, University of California, Berkeley 123

A Monte-Carlo Method for Analysing Non-linear Circuits. By Michael Schilder, Aerospace Research Central Precision Inc., Little Falls, New Jersey, U.S.A. 131

Optimal Regulation of a Class of Linear Stochastic Systems Relative to Quadratic Criteria. By P. J. McLane and P. W. U. Graefe, Analysis Laboratory, National Research Council of Canada, Ottawa, Canada 135

Formulation of the State-space Equations for Non-linear Networks. By A. G. J. MacFarlane, Control Systems Centre, Manchester University Institute of Science and Technology, Manchester 1 145

A Simplified Procedure for the Computation of the Coefficients of the Characteristic Equation from the Elements of the A-matrix. By J. I. Soliman and A. K. Kevorkian, Department of Mechanical Engineering, Queen Mary College, Mile End Road, London, E.1 163

A Study of State Spaces and Conditional Probability Distributions of a Class of Distributed Parameter Stochastic Systems. By K. Chuang, Department of Electrical Engineering, The University of Michigan 171

Plant Identification through Sinusoidal Response. By B. R. Pradhan, Institute of Radio Physics and Electronics, University of Calcutta, Calcutta, India 179

Research Notes:

On the Rotation of Magnetization in Thin Magnetic Films. By M. V. Pitke, Tata Institute of Fundamental Research, Bombay 5, India 185

On Applications of some Results Related to Bivariate Gaussian Density Distribution Functions. By S. V. Yadavalli, Stanford Research Institute, Menlo Park, California 191

Book Notices 195

NUMBER 3—MARCH

Linear Control of Non-linear Systems. By A. T. Fuller, Engineering Department, Cambridge University 197

Generalized Block Diagrams. By A. G. J. MacFarlane, Control Systems Centre, Manchester University Institute of Science and Technolgoy 245

Page

On Optimization of a Second-order Non-linear Control System for Various Performance Criteria. By A. K. Datta, Control Group, Engineering Department, University of Cambridge 269

Sensitivity Considerations in Specific Optimum Controls. By R. J. Burns, Honeywell Incorporated, Minneapolis, Minnesota, U.S.A. and K. S. P. Kumar, Department of Electrical Engineering, University of Minnesota, Minneapolis, Minnesota, U.S.A. 289

NUMBER 4—APRIL

A General Approach to the Machine Recognition of Patterns. By J. F. O'Callaghan, Department of Engineering Physics, The Australian National University, Canberra, A.C.T., Australia 297

A Critical Study of the R–x Plane Method. By R. N. Prabhakar, Radar Development Wing, Electronics and Radar Development Establishment, Bangalore, India 307

Control of a Distributed Parameter System with a Free Boundary. By P. K. C. Wang, Department of Electrical Engineering, University of Southern California, Los Angeles, California 317

Simultaneous Oscillations at Unrelated Frequencies in a Feedback Loop Containing only One Non-linearity. By N. B. Jones, Applied Sciences Laboratory, University of Sussex, Brighton, Sussex, England 331

Applications of the Multivariable Popov Criterion. By J. B. Moore and B. D. O. Anderson, Department of Electrical Engineering, University of Newcastle, Newcastle, New South Wales, Australia 345

Counter-Decoder Staircase Generator. By D. K. Basu and B. Nag, Department of Electronics and Telecommunication Engineering, Jadavpur University, Calcutta 32, India 355

On Parameter Invariance in Linear Control Systems. By N. H. McClarmoch, J. K. Aggarwal and L. G. Clark, The University of Texas, Austin, Texas 361

Stability Analysis of Non-linear Multivariable Systems. By N. Viswanadham and B. L. Deekshatulu, Department of Electrical Engineering, Indian Institute of Science, Bangalore 12, India 369

Performance Evaluation of Optimal Linear Systems. By V. V. S. Sarma and B. L. Deekshatulu, Department of Electrical Engineering, Indian Institute of Science, Bangalore 12, India 377

Page

Correspondence :

Comment on "A Method of Solving Time Varying Differential Equations". By M. Narsing Rao, Defence Research and Development Laboratory, Chandryan Gutta Lines, Hyderabad 5, Andhra Pradesh, India 387

Reply to the Comment on "A method of Solving Time Varying Differential Equations". By Y. V. Venkatesh and B. L. Deekshatulu, Department of Electrical Engineering, Indian Institute of Science, Bangalore 12, India 389

NUMBER 5—MAY

Sensitivity Problems in Distributive Systems. By William A. Porter, The Systems Engineering Laboratory, Department of Electrical Engineering The University of Michigan 393

Parameter Sensitivity in Distributive Feedback Systems. By William A. Porter, The Systems Engineering Laboratory, Department of Electrical Engineering, The University of Michigan 413

An Approach to Sub-optimal Feedback Control of Non-linear Systems. By W. L. Garrard, N. H. McClamroch and L. G. Clark, Department of Engineering Mechanics, The University of Texas, Austin, Texas 425

The Response Analysis of Linear Multivariable Systems by an Extension of the Serial/Matrix Technique. By E. Huntley, Department of Applied Mathematics and Computing Science, University of Sheffield.... 437

The Use of Legendre Polynomial Expansions in Solving Optimal Control Problems in the Space l^2. By Glenn A. Gibson and Someshwar C. Gupta 451

Application of the Second Method of Lyapunov to the Proof of the Markov Stability Criterion. By B. D. O. Anderson, Department of Electrical Engineering, University of Newcastle, Newcastle, New South Wales, Australia 473

A Modification of the Coates Gain Formula for the Analysis of Linear Systems. By S. Park Chan, Department of Electrical Engineering, University of Santa Clara, Santa Clara, California, and B. H. Bapna Lockheed Missiles and Space Company, Huntsville, Alabama 483

NUMBER 6—JUNE

A Determination of the Errors in the State Vector due to Quantization in a Hybrid Control Loop. By K. E. Tait and F. Lewin, School of Electrical Engineering, University of New South Wales, Sydney, Australia, and N. Newman, Royal Australian Navy, H.M.A.S. Derwent.. 497

Page

Sampling Interval Criteria with Non-linear Integrands and their Evaluation in Discrete-continuous Feedback Control Systems. By K. E. Tait, School of Electrical Engineering, University of New South Wales, Sydney, Australia 541

Generalized Closed Loop Loci of Peak Amplitude, Phase and Frequency of a Third-order Control System. By C. A. Karybakas, Nuclear Research Centre ' Democritos ', Athens, Greece 570

Sensitivity Analysis of a Class of Differential-difference Systems. By R. E. King, Electrical Engineering Department, Columbia University New York, N.Y. 10027 583

Dead-beat Response in Multi-variable Systems. By N. Viswanadham and B. L. Deekshatulu, Department of Electrical Engineering, Indian Institute of Science, Bangalore 12, India 589

Book Notices 595

Subject Index 597

Author Index 599

SUBJECT INDEX (Vol. V)

Bivariate Gaussian density distribution functions, application of some results related to, 191
Book Notices:
- Bertgold, F., mathematics for radio and electronic technicians, 195
- Blaquière, A., non-linear system analysis, 195
- Flores, I., computer design, 196
- Hammond, P. H., edited by, theory of self-adaptive control systems, 195
- Hoadley, H. W., manual of oscillography, 595
- Lammeraner, J. and Stafl, M., eddy currents, 195
- Lewis II, P. M. and Coates, C. L., threshold logic
- Ogata, state space analysis of control systems, 595
- Popell, S. D., computer time-sharing, 196
- Tomović, R., introduction to non-linear automatic control systems, 196
- Year Book and Buyers' Guide, instruments, electronics, automation, 195

Characteristic equation coefficients, computation from the elements of the A matrix, 163
Continuous stochastic system, derivation of moments of a, 85
Control system stability, inter-relation of sampling and transport lag in determining, 97
Counter-decoder staircase generator, 355

Dead-beat response in multivariable systems, 589
Describing function for backlash, 33
Discrete-continuous feedback control systems, evaluation of sampling criteria with non-linear integrands in, 541
Distributed parameter system with a free boundary, control of a, 317
Distributive feedback systems, parameter sensitivity in, 413
Distributive systems, sensitivity problems in, 393

Error function limiter, output signal-to-noise ratio of, 47

Feedback control, sub-optimal, of non-linear systems, 425
Feedback loop containing only one non-linearity, simultaneous oscillations at unrelated frequencies in a, 331
Frequency domain stability criteria for non-linear multivariable systems, 77
Generalized block diagrams, 245
Generalized closed loop loci of peak amplitude, phase and frequency of a third-order control system, 573

Linear systems:
- Large, dynamic, identification of parameters in, 123
- modification of the Coates gain formula for the analysis of, 483
- multivariable, response analysis by an extension of the serial/matrix technique, 437
- parameter invariance in, 361

Machine recognition of patterns, 297
Markov stability criterion, application of the second method of Lyapunov in proving, 473
Model reference adaptive control system using cost function criterion for driers and other dead-time processes, 55
Multivariable systems:
- dead-beat response in, 589
- linear, response analysis by an extension of the serial/matrix technique, 437
- reduction of sensitivity in, 1

Non-linear circuits, a Monte Carlo method for analysing, 131
Non-linear networks, formulation of the state-space equations for, 145
Non-linear systems:
- linear control of, 197
- multivariable, frequency domain stability criteria for, 77
- multivariable, stability analysis of, 369
- second-order, optimization for various performance criteria, 269
- sub-optimal feedback control of, 425

Optimal control problems in space l^2 solved by Legendre polynomial expansions, 451
Optimal linear systems, performance evaluation of, 377
Optimal regulation of a class of linear stochastic systems relative to quadratic criteria, 135
Optimization of a second-order non-linear control system for various performance criteria, 269
Optimum controls, specific, sensitivity considerations in, 289
Orthogonal expansion, is it desirable? 11
Output signal-to-noise ratio of an error function limiter, 47

Parameter invariance in linear control systems, 361
Plant identification through sinusoidal response, 179

Reduction of sensitivity in multivariate systems, 1
Response analysis of linear multivariable systems by extension of the serial/matrix technique, 437
R-x plane method, a critical study of the, 307

Sampling and transport lag, their interrelation in determining control system stability, 97
Sampling interval criteria with non-linear integrands in discrete continuous feedback control systems, evaluation of, 541
Sensitivity analysis of a class of differential-difference systems, 583
Sensitivity considerations in specific optimum controls, 289
Solar energy conversion systems, novel system for rapid acquisition of sun in, 23
State-space equations for non-linear, networks, 145
State-spaces and conditional probability distributions of a class of distributed parameter stochastic systems, 171
State vector, determination of errors due to quantization in a hybrid loop control, 497

Thin magnetic films, rotation of magnetization in, 185
Third-order control system, generalized closed loop loci of peak amplitude, phase and frequency of, 573
Time varying differential equations:
comment of ' a method of solving ', 387
reply to comment on ' a method of solving ', 389
simulation of, using an analog computer, 91
